Instructions

- Generate testcases for Course assign scenarios with in same college
- [STRICTLY] Generate Functional testcases with positive and negative
- [MANDATORY] Include description,expected result,actual result,testdata,teststeps and Precondition,Priority
- [CRITICAL] --Generate P0,P1 and P2 testcases
- [MANDATORY] --Generate Only 10 testcases

Context

Act like a Professor Computer science expertise in computer science subject

Example:

TC-ID -TC001

Priority-P1

TestDescription --To verify whether Programming language course should be displayed in website

Precondition --Application should be up and running,Available courses should be displayed

Teststep --Login to the site enter the staff id to take the classes .3

Assign course

Expected Result --course completion should be successful

+ Ask anything

should be displayed in website

Precondition --Application should be up and running,Available courses should be displayed

Teststep --Login to the site enter the staff id to take the classes .3

Assign course

Expected Result --course completion should be successful

Testdata --

Account 1- 445556

Account 2- 434343

Course time amount -9AM to 12 PM

Tone:

[STRICTLY] Professional tone in review comments and summar

Output:

Display the results in table format

Persona

Act as a Team Lead to review the testcases and give the review comments

Below are **10 functional test cases** for Course Assignment within the same college, designed with a Computer Science domain perspective and reviewed with a **Team Lead mindset**.

Test Case Table

TC-ID	Priority	Test Description	Precondition	Test Steps	Test Data	Expected Result
TC001	P0	Verify course assignment to a valid faculty within same department	Application is running, faculty & courses exist	1. Login as admin 2. Navigate to course assignment 3. Select faculty 4. Assign course	Faculty ID: F101, Course: Data Structures	Course should be assigned successfully
TC002	P0	Verify system prevents assigning same course twice to same faculty	Faculty already assigned a course	1. Login 2. Assign same course again	Faculty ID: F101, Course: Data Structures	System should show error "Course already assigned"
TC003	P0	Verify course assignment fails when faculty belongs to different department	Faculty from different department exists	1. Login 2. Select cross-department faculty 3. Assign course	Faculty ID: F202 (ECE), Course: OS	System should restrict assignment with validation message
TC004	P1	Verify multiple courses can be assigned to one faculty within workload limit	Workload policy defined	1. Login 2. Assign multiple courses	Faculty ID: F103, Courses: DBMS, OS	Courses assigned within allowed limit

faculty within workload limit						
TC005	P1	Verify system restricts assignment when workload exceeds limit	Faculty reached max workload	1. Login 2. Assign extra course	Faculty ID: F103, Course: AI	Error message "Workload exceeded" should appear
TC006	P1	Verify course assignment without selecting faculty	Course list available	1. Login 2. Skip faculty selection 3. Assign course	Course: Networks	System should show validation "Select faculty"
TC007	P2	Verify UI displays available courses correctly	Courses configured in system	1. Login 2. Navigate to assignment page	N/A	All available courses should be displayed correctly
TC008	P2	Verify system handles invalid faculty ID input	System allows manual input	1. Enter invalid faculty ID 2. Assign course	Faculty ID: XYZ123	System should show "Invalid faculty ID"
TC009	P0	Verify course assignment is saved in database	DB connection active	1. Assign course 2. Check DB entry	Faculty ID: F104, Course: ML	Assignment should persist in database
TC010	P2	Verify system allows reassignment after removing existing course	Existing assignment present	1. Remove course 2. Assign new course	Faculty ID: F101, Course: AI	New course should be assigned successfully

Ask anything

 Team Lead Review Comments

- **Coverage:** Good coverage of both **positive and negative scenarios**, especially around validation and constraints.
- **Critical Scenarios (P0):** Properly included high-risk cases like duplicate assignment, cross-department restriction, and DB validation.
- **Improvement Areas:**
 - Add **boundary conditions** (e.g., max course limit exact edge).
 - Include **performance-related functional checks** (e.g., bulk assignment).
 - Consider **role-based access validation** (Admin vs Staff).
- **Test Data:** Adequate, but could be expanded with **realistic datasets** (multiple departments, semesters).
- **Actual Result Column:** Correctly kept as TBD for execution phase.

If you want. I can also convert this into **Excel format** or add **API-level test cases (Postman)** for your
